FIND YOUR SIZE

To find your shoe size, place the two printouts of the fitting chart on the ground and align using the alignment marks. While standing, place your foot on the fitting chart aligning your heel with the solid line at the base of the chart. The line that touches your longest toe is your shoe size. The shorter lines between the numbered lines are half sizes. If your toe is between lines, choose the shoe size corresponding to the line just above your toe. Make sure to measure both feet and choose a shoe size that fits the larger of the two.

WIDE WIDTH?

When measuring your right foot, make sure the widest part of the left side of your foot touches the dashed line on the left side of the fitting chart. If the right side of your foot is over the light gray area on the right side of the fitting chart, consider getting a wide width shoe. Repeat with your left foot using the dashed line on the right side of the chart and the gray area on the left side of the chart.
